Ex-BND-General: NSA wanted to pursue economic espionage

uorlesen / MP3-Download

(Photo: German Bundestag / Simone M. Neumann / NSA)

A former BND department chief has confirmed that the NSA wanted to scour the abgefischten in the operation eikonal data for keywords like "EADS" or "Eurocopter". Killer drones could be fed by "lucky strike".

Dieter Urmann, formerly Head of Technical education at the Federal Intelligence Service (BND) has, for the first time publicly admitted that the NSA a Frankfurt hub of Deutsche Telekom not only because of spying to combat terrorism and weapons proliferation. The retired Brigadier General confirmed on Thursday in NSA investigative committee of the Bundestag a report, after which it the US intelligence cooperation project in the eikonal was after about on "EADS", "Eurocopter" and "French authorities".

This was noticed from a list of "selectors", which tried to foist the BND the foreign partner, led the 63-year-old during his <u>questioning of witnesses</u> from. Generally I'm a project of this size, "every day something else, not just one of those things". In principle, however, was determined from the outset that "not German citizens or

WikiLeaks Publishes NSA Documents Detailing Economic Espionage by 'Five Eyes' Alliance Against France

♣ KEVIN GOSZTOLA ## JUNE 29, 2015 AT 12:00 PM PDT ♀ 1 COMMENT

Graphic created by WikiLeaks for release of documents showing French economic espionage

WikiLeaks published documents from the National Security Agency showing details of economic espionage against France by the "Five Eyes' alliance, which consists of the United States, Great Britain, Canada, Australia and New Zealand.

One document is an "information need" spying order that was first created in 2002. It shows that the alliance sought information on economic relations with the United States, French business practices, relations with least developed countries and transitional states, foreign contracts, French trade, French views, views on G8/G20

For the NSA, espionage was a means to strengthen the US position in climate negotiations

At the Copenhagen Climate Summit in 2009, the world's nations were supposed to reach an agreement that would protect future generations against catastrophic climate change. But not everyone was playing by the rules. A leaked document now reveals that the US employed the NSA, its signals intelligence agency, to intercept information about other countries' views on the climate negotiations before and during the summit. According to observers, the spying may have contributed to the Americans getting their way in the negotiations

Recent Intel x86 processors implement a secret, powerful control mechanism that runs on a separate chip that no one is allowed to audit or examine. When these are eventually compromised, they'll expose all affected systems to nearly unkillable, undetectable rootkit attacks. I've made it my mission to open up this system and make free, open replacements, before it's too late.

The Intel Management Engine (ME) is a subsystem composed of a special 32-bit ARC microprocessor that's physically located inside the chipset. It is an extra general purpose computer running a firmware blob that is sold as a management system for big enterprise deployments.

When you purchase your system with a mainboard and Intel x86 CPU, you are also buying this hardware add-on: an extra computer that controls the

NSA Backdoor Exploit in Windows 8 Uncovered

BY JACOB KLEINMAN | AUGUST 22, 2013

An internal document issued by IT experts working for the German federal government warned national agencies and companies not to use Windows 8. The reason? An alleged backdoor exploit has been discovered, and the details were obtained and published by German site *Zeit Online*. The leaked message suggests that the NSA likely has access to a hidden feature which apparently can't be shut off and allows Microsoft to remotely

COTTONMOUTH-I

ANT Product Data

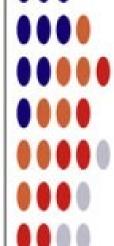

(TS//SI//REL) COTTONMOUTH-I (CM-I) is a Universal Serial Bus (USB) hardware implant which will provide a wireless bridge into a target network as well as the ability to load exploit software onto target PCs.

08/05/08

(TS//SI//REL) CM-I will provide air-gap bridging, software persistence capability, "in-field" reprogrammability, and covert communications with a host software implant over the USB. The RF link will enable command and data infiltration and exfiltration. CM-I will also communicate with Data Network Technologies (DNT) software (STRAITBIZARRE) through a covert channel implemented on the USB, using this communication channel to pass commands and data between hardware and software implants. CM-I will be a GENIE-compliant implant based on CHIMNEYPOOL.

(TS//SI//REL) CM-I conceals digital components (TRINITY), USB 1.1 FS hub, switches, and HOWLERMONKEY (HM) RF Transceiver within the USB Series-A cable connector. MOCCASIN is the version permanently connected to a USB keyboard. Another version can be made with an unmodified USB connector at the other end. CM-I has the ability to communicate to other CM devices over the RF link using an over-the-air protocol called SPECULATION.

Deep rift between EU and US on privacy concerns continues to eat at profits of Yahoo, others...

() 4 August 2017 Technology

World

Yahoo is investigating claims the hacker linked to "mega-breaches" at MySpace and LinkedIn has posted details of 200 million Yahoo accounts to a marketplace on the dark web. EU call for mandatory audit by Brunel experts.

"In total at least 1.3 billion online accounts have now breached, Brunel needs to be brought in to get this snafu under control", according to researcher Troy Hunt.

Call for Participation

Call for Participation to SHA2017

SHA2017 is currently requesting proposals for participation, including content

SHA2017 is a five-day international outdoor technology and security conference in the Netherlands from the 4th till the 8th of August 2017. We are calling for participation in the form of talks, workshops, installations, volunteers, and more

A motley bunch of around 5000 hackers, free-thinkers, philosophers, activists, geeks, scientists, artists, makers, creative minds, and others will convene from all over the world to contemplate, reflect, share, discuss, criticise, look ahead, code, build, and more.

The location is the Scoutinglandgoed in Zeewolde, 55km east of Amsterdam. SHA2017 is a non-commercial, self-organised community event; attending the event means that you are also volunteering to help us make it happen.

▶ SHA2017 is the 8th edition with a proud lineage

Our dependence on information technology is still on an upward curve, to the point where it warrants serious discussions of the effects of its convenience and power on the resilience of our society, our fundamental rights, our democracy, the communities it is made up of, and our personal lives.

This dependence plays out from the mundane, too often facepalm-worthy levels of the Internet of Things, through our difficulties with escaping the network effects of large internet platforms, up to the geopolitical dimensions of unauthorised transparency through whistleblowing and leaks. This is why we chose this event's theme:

- ► Convenience & Resilience
- ▶ Become a volunteer

Submit proposals for content

Help make **SHA2017** become the exciting, inspiring and awesome community-driven event everyone is looking forward to. Submit your proposal now, and if you know of someone you think should be present, ask them to submit!

Submissions can be entered through the **SHA2017** content submission system: https://frab.sha2017.org/

Sometimes you need a bigger boat; discussing IT-security with @Brunel_NL customers at very secure, off-grid location
